PROFESSIONAL SUMMARY

Backend Developer with 1.5+ years of experience building scalable microservices and enterprise B2B/B2C systems using FastAPI and Django. Experienced in async processing, distributed task queues, real-time systems, CI/CD automation, and production cloud deployments on AWS and DigitalOcean.

EXPERIENCE

Backend Developer

Orcalex Technologies LLP

Sep 2024 – Present

Bangalore, India

- **Django:** Architected multi-tenant backend with JWT authentication and role-based access control (RBAC) across School Admin, Teacher, and Student personas. Built real-time notification system using Django Channels and Redis Pub/Sub with sub-second WebSocket delivery.
- **FastAPI:** Designed high-performance async microservices with Pydantic validation and auto-generated OpenAPI docs. Implemented query-level caching and background lazy-loading jobs improving API response performance by 35%.
- **Celery:** Implemented distributed task queues with Redis broker to offload WhatsApp messaging, bulk notifications, and analytics processing. Configured beat schedules for periodic CRM jobs with retry policies and dead-letter handling.
- **Microservices:** Decomposed monolithic platform into 6+ independently deployable services (auth, CRM, exams, payments, notifications, analytics) with versioned API contracts and inter-service JWT validation.
- **Cloud & Deployment:** Containerized services using Docker and pushed images to AWS ECR. Deployed containers on AWS ECS with Fargate for serverless orchestration. Configured VPC networking, Auto Scaling groups, and Application Load Balancers for high-availability production workloads.
- **Linux & Infra:** Provisioned and managed Ubuntu VMs on DigitalOcean Droplets and AWS EC2 with server hardening (UFW, SSH keys). Configured Nginx reverse proxy with SSL termination, gzip compression, and upstream load balancing. Deployed services via Gunicorn/Uvicorn workers with zero-downtime migrations.
- **CI/CD:** Built GitHub Actions pipelines automating linting, tests, Docker image builds, ECR pushes, and deployments to staging/production. Established Git branching strategy with PR reviews and protected branches across all service repos.
- **React:** Contributed to frontend with state management, REST API integration, and real-time UI updates via WebSocket listeners for live notification feeds and CRM dashboards.

ENTERPRISE PRODUCTS

AidEducator.com | *FastAPI, Django, Channels, PostgreSQL, Redis, Celery, React*

- Enterprise education platform serving 10+ institutions (B2B) and individual learners (B2C) with microservice architecture spanning auth, CRM, exams, payments, and real-time notifications.
- Built AI-powered exam correction pipeline and Celery-driven engagement automation reducing manual intervention by 60%.

SmartLearners.ai | *FastAPI, Django REST Framework, MySQL, Redis, React*

- Scalable learning management platform with async processing, caching layers, and automation pipelines for analytics reporting and student progress tracking.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript

Backend: FastAPI, Django, Django REST Framework, Django Channels, Celery, Redis, RabbitMQ

Cloud: AWS (EC2, VPC, ALB, Auto Scaling, ECR, ECS, Fargate), DigitalOcean (Droplets, Spaces)

Infrastructure: Docker, Nginx, Gunicorn, Uvicorn, Linux (Ubuntu), Server Hardening, UFW

Databases: PostgreSQL, MySQL, MongoDB, Redis

CI/CD & Tools: Git, GitHub Actions, Docker → ECR → ECS Pipelines

Architecture: Microservices, REST APIs, JWT, WebSockets, Multi-Tenant RBAC, Async I/O

EDUCATION

JNTUA College of Engineering

Bachelor of Technology in Computer Science and Engineering; GPA: 7.0

Kalikiri, AP

Aug 2020 – May 2024
